no pins

no tape

no glue

no magnets...

they just stick!

justick

Introduction

*No pins * No glue * No magnets * Just science * Justick*

Justick is a patented and award winning electro-adhesion technology that offers a solution for a variety of display needs. It is a revolutionary electro-adhesion sheet, less than 1 mm thick, capable of attracting paper, laminates, plastics, etc., with sufficient force to be used in various office, commercial, advertising and educational applications.

Justick sheets attract display items over the entire contacting surface fixing them firmly without the need for pins, glues or magnets...they just stick!

Justick electro-adhesion technology is patented in all major countries globally. After many years of research and development, Justick is introducing this remarkable technological breakthrough to the world market through numerous innovative applications.

About Justick

Justick International (Pty) Ltd, a South African registered company, invented and patented the Justick electro-adhesion surface.

The South African market was used as a base to pilot production, gauge market perceptions, generate sales and form alliances with partners across the globe. Justick products have been tested in the market for several years and the success has led to an international expansion strategy.

It was no surprise that Justick received several awards for its hugely innovative product portfolio at America's largest invention trade show, INPEX 2006:

Justick received a gold medal in recognition of innovative excellence in the category of Office Supplies and Stationery

Justick won the acclaimed XEROX Innovation Award

Justick was awarded overall Grand Prix first runner up of all inventions, in all categories

In 2006 Justick continued to excel by being awarded "Best Locally Manufactured Product" by the Southern African Association of Stationery, Home and Office Products, competing with more than 7200 trade members.

In 2007 Justick was a finalist in the Technology Top 100 award for "Excellence in the Management of Innovation".

In 2008 Justick proceeded to win the Australian Promotional Association's "Best New Promotional Product" award.

Justick continues to aggressively pursue innovation excellence ultimately leading to an internationally recognized quality brand.

Technology

Justick is a unique and effective adhesion surface. Electrical energy flowing through the surface creates enough Coulomb forces to attract objects for a variety of practical purposes.

The Justick surface composition and functionality is a logical alternative to conventional adhesion methods.

Justick surfaces are smooth, polymer based, non-tacky and engineered to be easily manufactured and integrated as sub-components into a wide spectrum of end products. While primarily used in the display industry, its application is practically limitless, enabling a myriad of future applications.

Justick meets the high regulatory standards required in global markets as well as all safety requirements for home, office and commercial use.

Benefits

The benefits of the Justick technology are obvious when the user becomes familiar with the remarkable simplicity and versatility of the extraordinary adhesion force on the surface that defies the common perception of physics.

Justick products:

- * hold materials flat over the entire surface ensuring superior presentation quality
- * negate the need for pins, glue, sticky putty or magnets
- * are completely re-usable during their extended lifespan
- * retain their adhesive capabilities over time
- * do not damage the display material with normal use
- * save costs by printing on less expensive materials
- * make the placing and manipulating of objects easier, even with one hand
- * are lightweight and easily transportable
- * are non-tacky and easy to clean
- * are powered by compact battery, AC power supply or USB

Current Product Range

Justick Desktop ~ A versatile table-top unit perfect to use as a desk organizer, script holder, advertising display, corporate gift and much more.

Justick Compact 16"x24" ~ A display board retro-fitted to office and cubicle dividers for more efficient use of vertical space, clearing up the clutter around the common workstation.

Justick Lite 24"x36" ~ A display board for anything from training material, time tables, planners, calendar displays, important notices, etc.

Justick Project Board ~ A self standing tri-fold board great for individual presentations or educational exhibitions. Folds up for easy transportation.

Justick Strip ~ A wall mounted strip creating the ultimate solution for securing and displaying flipchart sheets in boardrooms and conference facilities.

Justick Exhibition System ~ A modular, portable stand for use at exhibitions, trade shows and corporate presentations.

Justick Large Format ~ Custom manufactured display boards in larger sizes and various frame options.
